end

(1) managing at least one audio conference, said at least one audio conference comprising a plurality of audio clients;

(2) receiving audio data from said plurality of audio clients;

(3) mixing said audio data to provide spatialized audio to said plurality of audio clients in said at least one audio conference,

wherein said mixing includes providing distance-based attenuation according to sound decay characteristics, and

wherein said mixing [means] results in mixed audio data; and

(4) delivering said mixed audio data to said plurality of audio clients in said at least one audio conference.

3 5/31 18. (Twice Amended) A computer program product comprising a computer useable medium having computer program logic recorded thereon for enabling an audio conference server (ACS) to provide an application program with multi-point, weight controllable audio conferencing, said computer program logic comprising:

means for enabling the computer to manage at least one audio conference, said at least one audio conference comprising a plurality of audio clients;

means for enabling the computer to receive audio data from said plurality of audio clients;

means for enabling the computer to mix said audio data to provide spatialized audio to said plurality of audio clients in said at least one audio [conferences] conference,

wherein said mixing means includes means for enabling the computer to provide distance-based attenuation according to sound decay characteristics, and

wherein said mixing means results in mixed audio data; and

means for enabling the computer to deliver said mixed audio data to said plurality of audio clients in said at least one audio conference.

Please add claims 45-48 to read as follows.

--45. (New) An audio conference server providing multi-point, weight controllable audio conferencing comprising:

- a management device managing at least one audio conference, said at least one audio conference comprising a plurality of audio clients;
- a receiver receiving audio data from said plurality of audio clients;
- a mixer mixing said audio data from said plurality of audio clients;
- wherein said mixer includes a distance-based attenuation device providing distance-based attenuation according to sound decay characteristics, and
- wherein said mixer provides mixed audio data; and
- an audio data delivery device delivering said mixed audio data to said plurality of audio clients in said at least one audio conference.--

--46. (New) An audio conference server providing multi-point, weight controllable audio conferencing comprising:

- a management device managing at least one audio conference, said at least one audio conference including a plurality of audio clients;
- a receiver receiving audio data from said plurality of audio clients;
- a mixer mixing said audio data from said plurality of audio clients;
- wherein said mixer includes a distance-based attenuation device providing

distance-based attenuation according to sound decay characteristics, and

wherein said mixer provides mixed audio data,

wherein said distance-based attenuation device includes:

an identification device identifying a plurality of pre-defined decay factors and a customized decay factor for each of said plurality of audio clients, said plurality of pre-defined decay factors including:

an audio big decay factor,

an audio small decay factor,

an audio medium decay factor, and

a constant decay factor,

a distance determining device determining a distance between a target audio client and a plurality of source audio clients,

a weighted value determining device determining a plurality of weighted values for each of said source audio clients based on said identified decay factor and said distance between each of said source audio clients and said target audio client, wherein each of said weighted values corresponds to a source/target audio client pair,

a mix table generator generating a mix table for each of said source/target audio client pairs,

a calculator calculating an actual mix for said target audio clients, and

a refining device refining the actual mix for said target audio clients; and

an audio data delivery device delivering said mixed audio data to said plurality of audio clients in said at least one audio conference.--

--47. (New) A computer executable code for an audio conference server providing multi-point, weight controllable audio conferencing, said code comprising:

- a management section enabling management of at least one audio conference, with said at least one audio conference comprising a plurality of audio clients;
- a receiving section enabling reception of audio data from said plurality of audio clients;
- a mixing section enabling the audio conference server to provide spatialized audio to said plurality of audio clients in said at least one audio conference, wherein said mixing section includes a distance-based attenuation section providing distance-based attenuation according to sound decay characteristics, and wherein said mixing section results in mixed audio data; and
- a delivery section enabling delivery of said mixed audio data to said plurality of audio clients in said at least one audio conference.--

(18)

--48. (New) A computer executable code for an audio conference server providing multi-point, weight controllable audio conferencing, said code comprising:

- a managing section enabling management of at least one audio conference, said at least one audio conference comprising a plurality of audio clients;
- a receiving section enabling reception of audio data from said plurality of audio clients;
- a mixing section enabling mixing of said audio data to provide spatialized audio to said plurality of audio clients in said at least one audio conference, wherein said mixing section includes a distance-based attenuation section enabling distance-based attenuation according to sound decay characteristics,

(18)

wherein said mixing section results in mixed audio data, wherein

said distance-based attenuation section includes:

an identification section enabling identification of a decay factor from one of a plurality of pre-defined decay factors and a customized decay factor for each of said plurality of audio clients, with said plurality of pre-defined decay factors including:

an audio big decay factor,

an audio small decay factor;

an audio medium decay factor, and

a constant decay factor;

a distance determining section enabling determination of distances between a target audio client and a plurality of source audio clients,

a weighted value section enabling determination of a plurality of weighted values for each of said source audio clients based on said identified decay factor and said distance between said source audio client and said target audio client, where each of said weighted values corresponds to a source/target audio client pair,

a mix table section enabling generation of a mix table for each of said source/target audio client pairs,

a calculation section enabling calculation of an actual mix for said target audio clients, and

a refining section enabling refinement of said actual mix for said target audio clients; and

a delivery section enabling delivery of said mixed audio data to said plurality of audio clients in said at least one audio conference.--
